

LOGISTICS SIMPLIFIED

For brand owners in the current competitive scenario, supply chain visibility is proving to be a major challenge. To possess the right product of the right quality at the right price, it is no longer sufficient. What differentiates brands from another is the possession of the right quantity of a product at the right time. In today's flat world, outsourcing is a reality and we see a number of brands outsourcing their manufacturing to various suppliers. To have the ability to reap the benefits of outsourcing yet have complete control over the supply chain is a challenge. The current state of visibility of orders, shipments and stocks - both in transit, across locations and the proactive controls in the supply chain - has a lot to be desired.

Most brand owners have invested in an ERP solution to take care of corporate functions such as finance, human resources, and procurement, however most of these solutions fall short when it comes to supply chain visibility and control. SCMProFit's supply chain visibility, provides a platform to connect key entities in the supply chain. It improves supply chain visibility and helps set up control points thus having a direct impact on efficiency and service levels.

EFFICIENCY REDEFINED

- ✓ RFID & Barcoding
- ✓ Marketplace Exposure
- ✓ Configurable Workflows
- ✓ Connectivity to ERP
- ✓ Mobility-based Operations
